

Q: How do I obtain "MDOT Airports Division Project Engineers Manual"?

A: Click [here](#) to see a .pdf version of this document. Please note the manual is in the process of being updated, however, this version is the most current at this time.

.....

Q: Element 1.24 states that the consultant will review material testing reports submitted by the contractor. Element 1.25 states that the consultant shall make periodic field tests and grade inspections at the project site to determine if materials and workmanship conform to plans and specifications. Is it the intent to have the contractor perform the tests and the consultant to witness and review the results?

A: The contractor is responsible for furnishing test reports for all materials that will be used in the project, which will be reviewed by the project engineer for acceptance. Per Section 60 of the [General Provisions for Construction of Airports](#), quality control/performance tests required to be performed in the field to determine if the work conforms to the specifications are the responsibility of the project engineer. In some cases the engineer will specify in the plans that quality control is the responsibility of the contractor and the project engineer will provide quality assurance testing. Refer to Appendix III of the Project Engineer's Manual and Section 60 of the General Provisions for Construction of Airports for more information.
